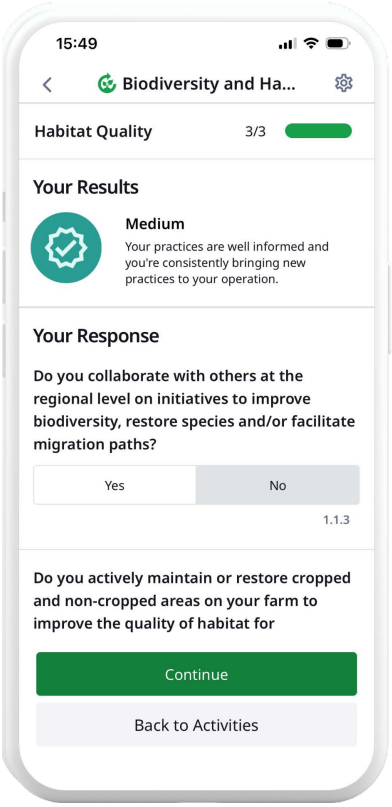
Cropwise Sustainability

Sustainability Made Simple

Cropwise™ Sustainability transforms farm data into simple, actionable insights that help your growers advance sustainable and regenerative agriculture with less effort.

It collects farm-level data and evaluates it using the Sustainable Outcomes in Agriculture (SOA) Standard, enabling you and your farmers to identify, measure and demonstrate continuous improvements.

- Meet internal and external ESG and sustainability reporting requirements at scale
- Benchmark performance across farms and regions with consistent outcomes and comparable insights
- Access trusted, crop-level GHG emissions estimates through the integrated Cool Farm Tool
- Drive meaningful, measurable outcomes aligned with your regenerative agriculture goals
- Free and easy for your farmers to use — with no long questionnaires or complicated data entry. Farmers maintain ownership of their data.



The Sustainability Outcomes in Agriculture Standard

Identify improvement opportunities using the globally recognized SOA Standard, which achieved GOLD equivalency with the Sustainable Agriculture Initiative Platform Farm Sustainability Assessment (FSA) v3.0. You can track and measure your progress in these areas:

Crop Production

Water Impact

Soil Health

Biodiversity

Human & Animal Health & Habitat

Community Leadership

View and Compare Sustainability Performance

Simplify your workflow with automated, reliable reports that make sustainability leadership easier.

- Review clear qualitative and quantitative metrics — including leadership scores, average yield, nitrogen use efficiency, crop acres and more — to support clear decision-making
- Understand how grower practices align with regenerative agriculture principles and identify opportunities for improvement
- Identify high-impact, region-specific improvement opportunities with qualified insights
- View interactive dashboards with aggregated and anonymized insights, enabling scalable reporting across your organization

Cool Farm Alliance Partnership

Access trusted, crop-level greenhouse gas emissions modeling through the integrated Cool Farm Tool, a unique differentiator that enables credible emissions reporting without extra data input.
