

Whole-farm sustainability assessments, simplified

Cropwise
Sustainability

Download the app

The Cropwise™ Sustainability app is available for free on the App Store and Google Play for Apple and Android devices. Search for “Cropwise Sustainability” through your preferred app provider or scan the QR code to download the app.

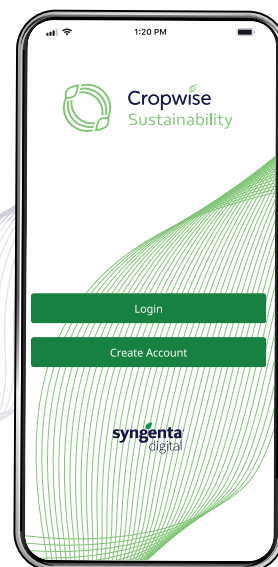

Create an account

Registering your farm is fast and free! Open your app and select “Create Account” to begin. Once you’ve designated an email and password for your account, you’ll be prompted to provide a few additional details to customize your experience, including:

- Primary crop
- Operation location*
- Irrigation usage
- Partners
- Employees

*Please use the full address of your operation including the postal code and country. Once saved, your address cannot be edited until your assessment is complete.

Start an assessment

Select the green “Get Started” button. You will be directed to the Activities tab, which contains a list of sustainability outcomes, each with tailored questions to help you connect existing on-farm practices to sustainability and regenerative agriculture concepts. The bars located at the top of each screen allow you to monitor your progress within each category. Your progress is automatically saved along the way so you can easily pause and resume your assessment at your convenience.

Once you have completed all the assessment questions, you will be prompted to submit your assessment. Please note that no changes can be made after submission. Your operation’s sustainability report will appear in the Reports tab with insights on your current state and opportunities for improvement.

Want to enhance your reporting? Estimate your operation’s greenhouse gas emissions and carbon sequestration using the Cool Farm Tool module. Simply navigate to the Carbon tab, review the terms and conditions, and select Estimate Emissions.
