

SECURECHOICE MOSQUITO ASSURANCE PROGRAM

Syngenta is committed to providing products with superior performance against mosquitoes. By following the treatment protocols specified in this sheet, pest management professionals (PMPs) can provide customers with a reduction in mosquito populations around their properties on either a 60-day or 30-day treatment cycle.

60-Day Assurance Program Details

The combination of Demand® CS insecticide and Archer® insect growth regulator can help reduce mosquito populations and free up technician time by moving to a 60-day treatment cycle. Make one application at the recommended application rates (see table to the right) one time on or about every 60 days per account. It is recommended to use a minimum of 2 gal. of finished liquid per 0.25 acres, or approximately 10,000 sq. ft. Finished liquid amounts will vary based on the size of the account.

30-Day Assurance Program Details

A lower use rate of Demand CS (see table to the right) is an excellent fit for a 30-day mosquito treatment cycle. Even when using Demand CS at its 0.03% rate, more than 20,000 microcaps will cover 1 sq. in. of a treated surface, resulting in thorough protection over an extended period. This cost-effective feature can give your customers peace of mind knowing a superior product formulation is helping reduce mosquito populations on their properties.

Assurance Offer

If applications of Syngenta products fail to provide adequate reduction of mosquito populations during the 60-day or 30-day treatment period, Syngenta will provide the appropriate quantity of Syngenta product required to cover the retreatment(s) as described in this SecureChoiceSM Mosquito Assurance Program sheet.

Recommended Rates

Program	Products	Concentration	Application Rate
60-day assurance program	Demand® CS insecticide	0.06%	0.8 fl. oz./gal.
	Archer® insect growth regulator	0.01%	1.0 fl. oz./gal.
30-day assurance program	Demand® CS insecticide	0.03%	0.4 fl. oz./gal.

To qualify for the SecureChoice Mosquito Assurance Program, treatments must be applied according to the SecureChoice Mosquito Assurance Program protocols outlined in this sheet.

Treatment Protocol for Mosquitoes

Application Methods

- Treat all vegetation, including but not limited to trees, bushes and shrubbery, from ground level up to a height of 10 ft.
 - Emphasize treating the underside of leaves, foliage and brush.
- Using the method above, treat the nearest perimeter areas out to the edge of the property.
- Identify and treat other areas typically used as mosquito resting sites, including under decks, near drainage spouts and other shady, moist areas.

Addressing Breeding Sites

- Focus on areas where standing water is common and cannot easily be drained, such as plant pots, under gutters and splashguards, low-lying grades and ditches that may be identified as high-potential mosquito breeding sites.
- For areas of standing water that can't be treated by a blower or mister (such as bird baths, drainage ditches, fish ponds, general standing water, etc.), use a larvicide, such as Altosid® insect growth regulator or Summit® Mosquito Dunks®, to reduce larval populations.

Other Information

- Provide educational materials about the necessity and types of measures to reduce mosquito breeding sites around the structure (such as bird baths, pet bowls, litter, etc.).
 - If the PMP does not have educational materials, Syngenta can provide them upon request.
- Treat each account one time on or about every 30 to 60 days during the mosquito season, depending on the SecureChoice Mosquito Assurance Program you choose.

Program Terms and Conditions

- PMP will follow all label guidelines, recommendations, use rates and treatment protocols as defined in the SecureChoice Mosquito Assurance Program.
- PMP will review all program materials with a Syngenta representative or authorized distributor representative prior to PMP participation in the SecureChoice Mosquito Assurance Program.
- PMP will agree to provide the following information in the event a retreatment(s) is/are necessary:
 - The amount of finished gal. of product per treatment, per account
 - The approximate area treated (acres or sq. ft.) per treatment, per account
- PMP will agree to work closely with Syngenta territory manager to perform the requirements in the SecureChoice Mosquito Assurance Program.
- Some properties may not be ideal candidates for receiving mosquito treatments. Little or no vegetation around a property makes it difficult to provide long-term residual control. Please consider this when discussing mosquito treatment options with customers in these situations.
- If PMP receives a complaint from an account that requires a retreatment within this SecureChoice Mosquito Assurance Program, despite following all label instructions and conditions within this SecureChoice Mosquito Assurance Program, **PMP must contact a Syngenta territory manager within seven days of the account being retreated.**
- If Syngenta determines the retreatment(s) is/are justified, Syngenta will provide the appropriate quantity of Syngenta product to cover the retreatment(s) of the account as needed. Syngenta will not pay for the application or other costs associated with retreatment(s).
- Syngenta reserves the right to investigate each product performance complaint, to verify all purchases or modify or discontinue this SecureChoice Mosquito Assurance Program at any time.
