A strong stewardship program is essential for protecting and preserving the long-term value of insect-protected trait technology. Syngenta provides responsible agriculture programs and information regarding the safe handling and storage of product.
The Corn traits portfolio from Syngenta offers a range of technologies that help manage production challenges and protect genetic yield potential.

**Agrisure Duracade®**

Agrisure Duracade® trait stacks offer the ultimate combination of the latest above and below ground insect control traits in a wide choice of diverse, high-yielding elite genetics with a simple, 5% integrated in-bag E-Z Refuge® seed blend. Agrisure Duracade trait stacks control 16 above- and below ground insects when combined with the power of the Agrisure Viptera® trait, more than any competitive stack. They offer a unique protein and multiple modes of action that make them the foundation of any corn rootworm management program.

**Agrisure Viptera**

Agrisure Viptera trait stacks provide the industry’s most comprehensive above-ground corn insect control. Controlling stalk-, ear- and leaf-feeding insects offers every plant the chance to mature and reach its full genetic yield potential. The Agrisure Viptera trait is the only trait available today that effectively controls western bean cutworm. Preventing corn ear insect feeding protects grain quality and minimizes the subsequent development of molds and mycotoxins that result from the insect injury.

**Agrisure Artesian®**

Agrisure Artesian® corn hybrids maximize yield when it rains, and increase yield when it doesn’t. These elite hybrids convert water to grain more efficiently than other hybrids and represent a simple, effective way to help manage the unpredictability of weather. Available in combination with best-in-class insect control and herbicide tolerance traits, Artesian™ corn hybrids can help improve yield stability and consistency on virtually any corn acre.

Products with the E-Z Refuge seed blend offer an integrated single-bag refuge to help meet grower demand for increased convenience. They provide at least dual modes of action on key pests and are designated by “E-Z Refuge” at the end of the trait stack name.
Bacillus thuringiensis (Bt) proteins are toxic to specific pests such as the European corn borer (ECB or CB) and the corn rootworm (CRW or RW). As the number of acres exposed to these Bt products increases, so does the potential for target insect pests to develop a resistance to Bt traits. Therefore, in order to preserve this technology now and into the future, an Insect Resistance Management (IRM) plan was developed. A major component of an IRM plan is to plant a refuge. The EPA requires a refuge on every farm that plants Bt corn hybrids. The EPA requires companies that market Bt corn hybrids to have structured refuge requirements and conduct a grower compliance program. IRM education and compliance are uniform across the U.S. corn industry to ensure a consistent IRM message.

**GROWER STEWARDSHIP AGREEMENT**

A strong stewardship program is essential for helping to protect and preserve the long-term value of change to Agrisure® trait technology. Embracing this responsibility provides growers with ongoing choices and helps to ensure they remain good stewards of the land.

Prior to planting corn hybrids with Agrisure traits, you are **required** to sign a Syngenta Seeds, LLC Stewardship Agreement. This agreement outlines the terms and conditions of growing hybrids with Agrisure traits, including the terms of a limited license under Syngenta’s intellectual property, compliance with Environmental Protection Agency (EPA)-mandated IRM programs and grain channeling requirements. **Deadline to have all completed agreements to Syngenta is August 15th, annually.**

Agreements may be sent using the following four methods:

**ONLINE**
WWW.AGCELERATE.COM
Click on Register or Login
For support using the AgCelerate tool, please call AgCelerate Customer Service at 1-866-784-4630

- Easy to sign and use
- Reduces paperwork
- Simple way for growers to manage their technology agreements across all trait providers

**ELECTRONIC STATEMENT**
Electronic signatures will only be accepted through agcelerate.com. Any other forms of electronic signatures will be rejected.

**EMAIL**
GLG@KONNERTHCONSULTING.COM
FAX
800-643-8350
MAIL
Your Local Supplier or Konnerth Consulting Attn: Stewardship
PO Box 316
New Melle, MO 63365

Only use one method; originals are not required. It is important that you keep a copy of the Syngenta Seeds, LLC Stewardship Agreement for your records. If you have questions regarding the Stewardship Agreement or how to submit the form, please call 877-GRO-CORN (877-476-2676).
INSECT RESISTANCE MANAGEMENT (IRM)

IRM COMPLIANCE ASSURANCE PROGRAM
Syngenta and other industry registrants have cooperatively developed the EPA-mandated IRM Compliance Assurance Program. This program requires corn seed companies to evaluate the extent to which growers are adhering to the IRM requirements and ensure that those who do not are brought back into compliance. Growers who do not meet IRM requirements for two years within a five-year period will be denied access to hybrids with Agrisure® insect-protected traits in the third year as mandated by the EPA.

ON-FARM ASSESSMENTS
As part of the product registration with the EPA, Syngenta and other seed companies are required to conduct IRM assessments to help ensure growers are planting the correct refuge on their farms. Growers are selected using a set of risk-based criteria, and assessed with a series of questions that must be conducted in person with the grower or their representative. Following each on-farm assessment, it will be determined if the grower is in compliance.

All trait providers are required to participate and contract a third-party company to complete all assessments during the growing season (June – September).

Growers found to be out of compliance with the refuge requirements jeopardize their access to Bt corn products. They will receive a letter informing them of their compliance infraction, reminding them of their compliance obligations and the consequences of not adhering to the requirements. Included in each letter will be further information on how to develop and implement a suitable IRM program for their farm. Additionally, any grower found to be out of compliance will receive a follow-up IRM assessment the next growing season.

IRM TIP LINE
If you have any seed stewardship questions or become aware of individuals not following proper IRM practices as noted in this guide, please call the tips and complaints toll-free phone line at 1-877-GRO-CORN (1-877-476-2676).

Growers are encouraged to scout their fields. If unexpected damage is observed, please contact your seed reseller or company representative.

CORN REFUGE REQUIREMENTS

SIZE REQUIREMENTS ARE BASED ON GEOGRAPHY AND PRODUCT

5% OR 20% REFUGE - CORN GROWING AREAS

20% OR 50% REFUGE - COTTON GROWING AREAS

THE FOLLOWING STATES AND COUNTIES ARE CONSIDERED CORN-GROWING AREAS. REPRESENTED BY LIGHT GREEN SHADING.

- Alabama
- Arkansas
- Florida
- Georgia
- Louisiana
- Mississippi
- Missouri (only the counties of Dunklin, New Madrid, Pemiscot, Scott, & Stoddard)
- Montana
- Nebraska
- Nevada
- New Hampshire
- New York
- North Dakota
- Ohio
- Oklahoma (all counties except Beckham, Caddo, Comanche, Custer, Garza, Hartley, Howard, Jones, Kingman, Tillman, & Wheeler)
- Oregon
- Pennsylvania
- Rhode Island
- South Dakota
- Tennessee (all counties except Carroll, Chester, Crockett, Dyer, Faye, Franklin, Gibson, Hardin, Hardeman, Harp, Henderson, Lake, Lauderdale, Lincoln, Madison, Mann, Obion, Rutherford, Shelby, & Tipton)
- Texas (all counties except Carson, Dallam, Hanford, Hartley, Hall, Hudspeth, Newton, Morris, Ochiltree, Roberts, & Sherman)
- Utah
- Vermont
- Virginia (all counties except Greensville, Isle of Wight, King, Nelson, Northampton, Southampton, Suffolk City, Surry, & Sussex)
- Washington
- West Virginia
- Wisconsin
- Wyoming

THE FOLLOWING STATES AND COUNTIES ARE CONSIDERED COTTON-GROWING AREAS. REPRESENTED BY LIGHT BLUE SHADING.

- Alabama (only the counties of Calhoun, Franklin, Lowndes, Macon, Monroe, Montgomery, and Talladega)
- Arkansas
- California
- Colorado
- Connecticut
- Delaware
- Hawaii
- Idaho
- Illinois
- Indiana
- Iowa
- Kansas
- Kentucky
- Louisiana
- Maine
- Maryland
- Massachusetts
- Michigan
- Minnesota
- Mississippi
- Missouri (all counties except Dunklin, New Madrid, Pemiscot, Scott, & Stoddard)
- Montana
- Nebraska
- Nevada
- New Hampshire
- New Mexico
- New York
- North Dakota
- Ohio
- Oklahoma
- Oregon
- Pennsylvania
- Rhode Island
- South Dakota
- Tennessee (all counties except Carroll, Chester, Crockett, Dyer, Faye, Franklin, Gibson, Hardin, Hardeman, Harp, Henderson, Lake, Lauderdale, Lincoln, Madison, Mann, Obion, Rutherford, Shelby, & Tipton)
- Texas (all counties except Carson, Dallam, Hanford, Hartley, Hall, Hudspeth, Newton, Morris, Ochiltree, Roberts, & Sherman)
- Utah
- Vermont
- Virginia (all counties except Greensville, Isle of Wight, King, Nelson, Northampton, Southampton, Suffolk City, Surry, & Sussex)
- Washington
- West Virginia
- Wisconsin
- Wyoming
**CORN REFUGE REQUIREMENTS**

*Only required for non E-Z Refuge products*

**SINGLE PEST REFUGE**
A single pest refuge is a field that serves solely as a refuge for above-ground pests (e.g., European corn borer) or below-ground pests (e.g., corn rootworm), but not both. The single pest refuge approach can be used for both single Bt corn products and stacked Bt corn products (also known as the Separate Refuge option).

**SINGLE BT CORN PRODUCTS** (E.G., AGRISURE VIPTERA® 3110)

**COMMON REFUGE**
A common refuge is a field or area of corn that serves as a refuge for both above-ground pests (e.g., European corn borer) and below-ground pests (e.g., corn rootworm) at the same time. The refuge can be within the Bt field or immediately adjacent to it.

**STACKED BT CORN PRODUCTS** (E.G., AGRISURE® 3000GT)

- Refuge size is calculated by applying the appropriate percentage (e.g., 20%, 50%) to the TOTAL CORN ACRES.
- Key:
  - **INSECT-PROTECTED BT CORN**
  - **BELLOW-GROUND PEST REFUGE (RR)**
  - **ABOVE-GROUND PEST REFUGE (CB)**
  - **BELLOW-GROUND AND ABOVE-GROUND PEST REFUGE (RM/CR)**

**INSECT-PROTECTED BT CORN**

*Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium-based herbicides. Under federal and local laws, only dicamba-containing herbicides registered for use on dicamba-tolerant varieties may be applied. See product labels for details and tank mix partners.

**产品质量**

这些产品可能作为阿格瑞瑟阿特里森®玉米杂交种提供，其种植可以更有效地利用水。阿特里森™玉米杂交种由“A”字符标记在性状堆栈名称的末尾。

**产品分类**

- **单一Bt玉米产品**（例如，阿格瑞瑟维特拉® 3110）
- **叠置Bt玉米产品**（例如，阿格瑞瑟维特拉® 3111）

**关键**

- **昆虫保护型Bt玉米**
- **地下害虫保护区（RR）**
- **地上害虫保护区（CB）**
- **地下和地上害虫保护区（RM/CR）**

**昆虫保护型Bt玉米**

- 阿格瑞瑟2010性状堆栈之前作为阿格瑞瑟® GT/CB/LL出售。
**CORN REFUGE REQUIREMENTS**

*Only required for non E-Z Refuge products*

**REFUGE PLANTING OPTIONS**

Refuge can be planted as a block, strips within the field, perimeter around the field, adjacent or a separate block within 1/2 mile of the field.

- 1/2 mile option may only be used for corn borer refuge
- A neighbor’s field does NOT meet the refuge requirements

**WITHIN**

- **BLOCK**
- **STRIPS (SPLIT PLANTER)**
- **PERIMETER**

**ADJACENT**

- CAN BE SEPARATED BY A ROAD, PATH, DITCH, ETC., BUT NOT BY ANOTHER FIELD

**1/2 MILE OPTION**

- CORN BORER REFUGE OPTION ONLY

Reminder: When calculating a refuge, the calculation must be based on total corn acres.

---

**SYNGENTA STEWARDSHIP GUIDE**

**CORN**

**CORN REFUGE REQUIREMENTS**

**STRIP REFUGE**

Four Row Minimum – Strips, blocks, or perimeter refuges must be a minimum of four contiguous rows wide to provide ample space for bug mating.

**TREATMENT**

- **Corn Borer Treatment** – Non-Bt foliar insecticide treatments for corn borer control may be applied only if economic thresholds are reached for one or more pests. Economic thresholds will be determined using methods recommended by local or regional professionals (e.g., Extension Service agents, crop consultants).
- **Corn Rootworm Treatment** – Insecticide treatments for control of corn rootworm larvae may be applied. If rootworm adults are present at time of foliar applications, then corn fields with the Agrisure® trait must be treated in a similar manner as the refuge.

**REFUGE MANAGEMENT**

Refuge should be planted with a hybrid that is agronomically similar to and managed similar to your corn with Agrisure® traits.

If a rootworm refuge is planted in a field that is in a crop rotation system, the corn hybrids with Agrisure traits must also be planted in a field that is in a crop rotation system.

If the rootworm refuge is planted on continuous corn, the corn hybrids with Agrisure traits may be planted on either continuous or in a crop rotation system.
**MANAGE CRW WITH INSECTICIDES**

**Adult CRW Management Considerations**
- Scout fields for CRW adults during silking stage (typically July and August) as adult CRW beetles feed on corn silks and may reduce yield.
- Foliar sprays may be an option if CRW beetle populations reach an economic threshold for damage (~1 beetle per plant).  
- Follow university extension service or local crop consultant recommendations for products, rates and proper timing of adult spray applications for reducing CRW beetle populations.
- Multiple sprays may be necessary.

**Larval CRW Management Considerations**
- The application of an insecticide to the soil surface, in furrows, and/or incorporated into the soil (referred to as “soil-applied insecticide,” “soil insecticide” or “SAI”) is not recommended for control of CRW in Bt-traited corn hybrids except under limited circumstances.
- Consult with extension, consultants or other local experts for recommendations when considering a combination of CRW traits and soil-applied insecticides.
- SAIs should not be necessary for CRW control with pyramided CRW-traited Bt corn hybrids.

**PLANT THE REQUIRED REFUGE**

**CROP ROTATION PRODUCTS WITH MULTIPLE CRW Bt TRAITS**

**Important grower information. This hybrid requires you to plant:**

- 20% refuge
- 50% refuge

For additional refuge planning tools please visit www.irmcalculator.com.

**ASSESS RISK:**

To effectively manage corn rootworm (CRW), implement a multiyear plan that includes a variety of tactics.

**TAKE ACTION PROGRAM AND REFUGE LOOKUP**

Take Action Insect-Resistance Management is a farmer-focused educational platform designed to help farmers implement Bt stewardship practices. Take Action is an industry-wide partnership between university scientists, seed biotech companies, including Syngenta, commodity organizations and National Corn Growers Association (NCGA) to create resources and tools to help our growers plan how to meet the minimum refuge requirements and how to implement best management practices on their farm.

To find out more about how you can take action, visit www.iwilltakeaction.com/insects

---

The Agricultural Biotechnology Stewardship Technical Committee, National Corn Growers Association and all other Take Action partners neither recommend nor discourage the implementation of any advice contained herein, and are not liable for the use or misuse of the information provided.
### Calculating Your Corn Refuge

Reminder: when calculating a refuge, the calculation must be based on total corn acres. This section outlines the right and wrong way to calculate a refuge. Refer to this diagram for the examples provided on below.

![Diagram](image)

<table>
<thead>
<tr>
<th>Total Corn Acres*</th>
<th>Refuge Acres</th>
<th>Bt Acres</th>
<th>Percent of Required Refuge (based on total corn acres)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>B</td>
<td>C</td>
<td></td>
</tr>
</tbody>
</table>

*Includes all corn acres that are infield or adjacent to each other and will be allocated to the Bt product and its associated refuge

**The Wrong Way to Calculate**

Do **NOT** multiply the amount of Bt acres or seed by the percent of refuge required.

Example:

- **A**: 160
- **%**: 20%

This is not the correct minimum refuge size.

Example:

- **A**: 200
- **%**: 20%

This is your minimum refuge acres.

**The Correct Way to Calculate**

Start with the total number of corn acres you want to plant in an area.

Multiply by the percent of refuge required for the Bt trait. This is your minimum refuge acres.

Example:

- **A**: 200
- **%**: 20%

This is your maximum Bt acres.

**Assess Risk**

- Did you plant the same CRW traits for consecutive years in the same fields?
- Did you notice large populations of CRW beetles?
- Did you observe root injury from CRW larvae?
- Are your fields planted to continuous corn?
CORN ROOTWORM
BEST MANAGEMENT PRACTICES

1. PLANT THE REQUIRED REFUGE

2. ROTATE CROPS

   Rotate at least every third year if any of the following apply:
   ► In long-term continuous corn system
   ► CRW populations are high
   ► Experiencing problems with CRW trait performance

   Corn rootworm management options may be needed the year following corn in areas where northern CRW extended diapause or western CRW variant are present.

3. ROTATE TRAITS

   Use Bt hybrids with multiple modes of action for CRW control whenever possible.
   If using a hybrid with multiple modes of action for CRW control is not an option, rotate to a different Bt-traited hybrid that controls CRW.
   Use a non-Bt-treated hybrid with insecticide.

MANAGE CRW WITH INSECTICIDES

Adult CRW Management Considerations
Scout fields for CRW adults during silking stage (typically July and August) as adult CRW beetles feed on corn silks and may reduce yield.
Foliar sprays may be an option if CRW beetle populations reach an economic threshold for damage (~1 beetle per plant).\(^1\)
Follow university extension service or local crop consultant recommendations for products, rates and proper timing of adult spray applications for reducing CRW beetle populations.
Multiple sprays may be necessary.

Larval CRW Management Considerations
The application of an insecticide to the soil surface, in furrows, and/or incorporated into the soil (referred to as “soil-applied insecticide,” “soil insecticide” or “SAI”) is not recommended for control of CRW in Bt-treated corn hybrids except under limited circumstances.
Consult with extension, consultants or other local experts for recommendations when considering a combination of CRW traits and soil-applied insecticides.
SAIs should not be necessary for CRW control with pyramided CRW-traited Bt corn hybrids.
