

# ENOGEN STEWARDSHIP KEYS TO BE COMPLIANT

Enogen® corn is not commodity corn. It is a high-value specialty grain that must be managed as an identity-preserved crop to ensure it reaches its intended destination.

## COMMUNICATION IS KEY

Talk to neighboring farmers to share:

- ▶ Cropping intentions
- ▶ Expected seed maturity
- ▶ Designated fields
- ▶ Planting date

The sooner the conversation begins, the better. Because open communication underlies the entire stewardship process.

## ENOGEN STEWARDSHIP CONTRACT

Outlines all Stewardship Requirements based on end use

- ▶ Enogen grower must have a signed agreement in place

## PLANTING PROTOCOLS

1. Ensure 30 ft. border rows are adjacent to other annual crops (regardless of ownership) unless separated by a physical border of 30ft. or greater (i.e., tree lines, roads, etc.)
2. Hybrid chosen for border row should have similar maturity and herbicide resistance as Enogen hybrid
3. If any changes in planting from contract, contact your Syngenta representative
  - ▶ Field location changes?
  - ▶ Acre shift?
4. Equipment must be cleaned after planting
  - ▶ If using third party to plant, be sure they are aware of stewardship requirements
5. Properly dispose of unused Enogen seed
  - ▶ Bury
  - ▶ Burn
  - ▶ Return for credit (including partial bags)

## HARVEST

1. Harvest the border rows and mix in with your Enogen grain or silage. Border rows are NOT to be considered commodity corn
2. Equipment must be cleaned after harvest
3. In the event of overproduction/excess grain, Syngenta personnel must be contacted for direction

## TRANSPORTATION AND STORAGE

Enogen grain should be clearly identified during transport and storage. This includes labeling:

- ▶ All trucks
- ▶ Trailers
- ▶ Grain bins
- ▶ Auger switches

## DOCUMENTATION

- ▶ Enogen fields must be identified and mapped in system no later than March 15
  - Any changes to field locations must be updated in a timely fashion
- ▶ After planting is complete, planting details must be completed in the post-planting stewardship form
- ▶ After harvest is complete, harvest details must be completed in the post-harvest stewardship form

## ANNUAL TRAINING

- ▶ Growers are required to watch Enogen stewardship training video as part of Enogen contracting process

### REMINDER:

- ▶ After planting, both the Enogen rows and the border rows may be verified. Audits may also be conducted by a third party.
- ▶ Enogen growers are still required to follow all Trait Stewardship requirements that are outlined in the Insect Resistance Management Stewardship Guide found at [www.syngentastewardship.com](http://www.syngentastewardship.com).

**For additional details please refer to the Enogen Stewardship Guide or contact your Syngenta representative with questions.**
